Internet Access for the Poor
Coming to
San Francisco Community Centers

Working Media's Internet Access for the Poor project places AT&T 3G connected pad computers secured to laptop stands in the lobby's of San Francisco community based organizations. This pad based Internet access system is wireless and rechargeable so it runs all day without any electric plug or cables. The touch screen pad is user friendly, easy to lean and unbreakable with normal use. Placed in waiting rooms and hiring halls they provide an opportunity for poor people to learn and use the best technology in the world. They can access information on the agencies they are visiting and get news, mobile email, maps and transit information. These units are often used to entertain kids waiting with parents and quickly turn into a family learning experience.
